

To whom it may concern,

I am pleased and privileged to write a letter of recommendation for my dear friend and student Abdelrahman Hamdy. I highly recommend Abdelrahman to your organization for the internship program. I have had the distinct pleasure of having Abdelrahman as a student in my debate classes for nearly two years as he has taken the following courses that I teach: object oriented programming and algorithms design and analysis. Abdelrahman has been more than the ideal student morally and scientifically. As his teaching assistant, I have had an opportunity to observe his participation, his tremendous growth, progress and interaction in class and to evaluate his knowledge of the subject matter. This progress not only in the area of tasks achievement and leadership, but in his character and maturity as well.

Abdelrahman has natural leadership abilities and he has a passion for self learning and doing the best as well. He fulfilled all the requirements with the added challenge of honors and advanced courses. He is not only interested in degrees, but also the work's high performance and efficiency, he is responsible for. For example, in his algorithm's project that was an intelligent scissors tool, he succeeded in selecting objects from large sized images with high accuracy using efficient algorithms time wise and memory wise as well despite it was a challenge for the major of students to handle the algorithm's performance and accuracy. Abdelrahman's project in the algorithm's course is the top one in the intelligent scissors projects and top one in the overall projects grades wise and effort wise as well, as he is a patient student with strong computer programming skills and effective thinking. He didn't suffice to the requirements but Abdelrahman always seeks for more knowledge to be self-learned in order to introduce efficient and unique work in the same time. So, he has proven that through hard work, follow though, and team work, he is able to successfully complete multiple tasks with favorable, efficient and accurate results despite deadline pressure.

Besides Abdelrahman's success in his main studies, he is interested in problem solving and he is a member in ACM ASCIS committee which is a student activity that teaches students programming, problem solving, programming algorithms and helps college students to participate in ACM ICPC contests to grow their thinking and their programming skills as well. He also participated in the ECPC held which is a multitier, team-based, programming competition operating under the auspices of ACM. What I try to say is that Abdelrahman is well equipped to manage his time to held many activities besides his main work to learn himself and others and in order to gain new experiences as well.

Abdelrahman's dependability, planning skills, and communication with students are all part of his strengths. He is committed, helpful and clear-sighted and he has made me proud, as his teacher and friend, so, if you give him the opportunity I am sure you will find him equally impressive. So, without hesitation, I recommend Abdelrahman unequivocally for your internship program.

Yours sincerely,

Ghada Hamed
